

Abstract

A sheet-form adhesive preparation which gives a comfortable refreshing feeling in use, gives a wet feeling to the skin, and is usable as a cosmetic, medicinal, or quasi-drug preparation for the sake of skin adjustment and beauty. The preparation preferably has a quantity of heat required for water evaporation of 0.6 to 13 (cal) per unit area (cm^2) when exposed for 30 minutes to an atmosphere of 25°C and 60% Rh.
